📍 Casablanca, Morocco

State Software Engineer with expertise in developing **critical software products within international environments**. Involved in the full project lifecycle -from business scoping to Go-Live- I combine a consultative approach with technical mastery of **Web & Mobile development**. With a focus on delivering user-centric features I aim to leverage this dual skill set to engineer high-performance solutions for your organization

Education

State Engineering Degree in Software Engineering & Distributed Systems (GLSID) **2022 - 2025**
ENSET Mohammedia

Associate Degree in Physics (DEUG SMP) **2020 - 2022**
Faculty of Sciences Ben M'Sik, Casablanca

Technical Skills

- **Development** : Java (SpringBoot ecosystem), JavaScript (React, React Native), XML, PL/SQL, Python
- **Data & Tools** : Oracle DB, PostgreSQL, MongoDB, Docker, Kubernetes, Keycloak, JUnit, Git/GitLab, Jira
- **Architecture** : Microservices, APIs REST, MVC, Design Patterns, System Design, Unit/Integration Testing

Professional Experience

SQORUS | Software Engineer (Full-time) **August - Present 2025**

Played a key role in the overhaul of a critical financial close management system for the international group Linxens

- Developed key modules, complex APIs and PL/SQL procedures to optimize data processing pipelines
- Significantly reduced end-to-end processing time and increased user satisfaction by 50%
- Managing environments (Test/Production), overseeing integration testing, and training/supporting end users

SQORUS | Software Engineer (End-of-Studies Internship) **February - July 2025**

Designed and deployed a configurable digital solution (Web & Mobile) for the operational management of airport services (real-time flight tracking, billing, ground services) on an international scale

- Contributed to the modeling of complex data and developed business logic in PL/SQL on Oracle Database
- Built modern and intuitive Web & Mobile user interfaces
- Designed and exposed secure REST APIs to power the mobile application (React Native)
- Progressed with Scrum methodology, facilitated Sprint Reviews with the client, and implemented feedback corrections leading to a successful Go-Live

Onedustry Technologies | Software Engineer (Intern) **July - September 2024**

Developed the MVP of a Fintech mobile application dedicated to money transfer and instant payments, based on a Microservices architecture with biometric authentication

WEBEX-IT | Frontend Developer (Intern) **August - September 2023**

Enhanced the web interface of a subscription management application

AJYALONA Training Center | Computer Science Instructor (Part-time) **February - June 2023**

Provided academic support in C/C++ programming and Linux for 2nd year university students

- Demonstrated strong pedagogical and interpersonal skills; students achieved top scores (18/20 and 17/20)

Projects

westreakers.com (In Progress) | <https://front-westreakers-com.vercel.app>

A gamified community platform for managing shared goal streaks. Users engage in communities, track progress, maintain collective streaks, and access motivating leaderboards

Stack :Spring Boot, React.js, PostgreSQL, JUnit, Docker

Vectra AI (Chrome Extension powered by AI) | <https://github.com/Vectra-Project/>

Project aiming to simplify and personalize the job search process with features such as matching scores, personalization, and CV improvement

Stack :Spring Boot, FastAPI, React, Plasmio, Gpt4o API, JWT

Certifications & Awards

Java & Algorithms Path CodeSignal	React Design Patterns Linkedin Learning	MNPC 2023 Finalist Moroccan National Programming Contest	N7 CTF 1st Prize ENSET-M CTF 2024
